RE: Request and change in Dredging Permit for the Safe Harbor

This committee would like to have our City work with the Corp of Engineers or DBA in getting all three of our dredging permits written and submitted as soon as possible.

We understand that a permit is required for the Safe Harbor work that is planned by the DDA Committee. We would like you to consider adding that the dredging also includes a navigational canal North East of the Pier. The sand that is dredged could be used to fill Geo Tubes if this committee, City and residents agree to this type of system to support our concrete dike and stop erosion. FEP will be investigating this option. We also hope that a geo system would cover most, if not all, of the cylinders that have no covers and this could offset some of our expense in covering these cylinders.

Thank you for taking this issue seriously and we look forward to your reply and action.

Sincerely,

Susan S. Lopes, Chair
Chris Heid, Vice
Linda Emptage, Secretary
